

Grip + Tines

Continuous visibility and automated action to secure the SaaS-Identity attack surface

Automate offboarding, remove access risk

- Leverage Tines Pages to easily offboard identities, triggering Grip workflows to revoke access to targeted SaaS, users, or both.
- Rapidly remediate access risk, including dangling access and zombie accounts from former users and abandoned SaaS services. Automate offboarding to remove accumulated identity risk.
- Speed up and scale incident response by annihilating existing credentials, shielding identities exposed to the compromised SaaS

Track identity risk and mitigate sprawl

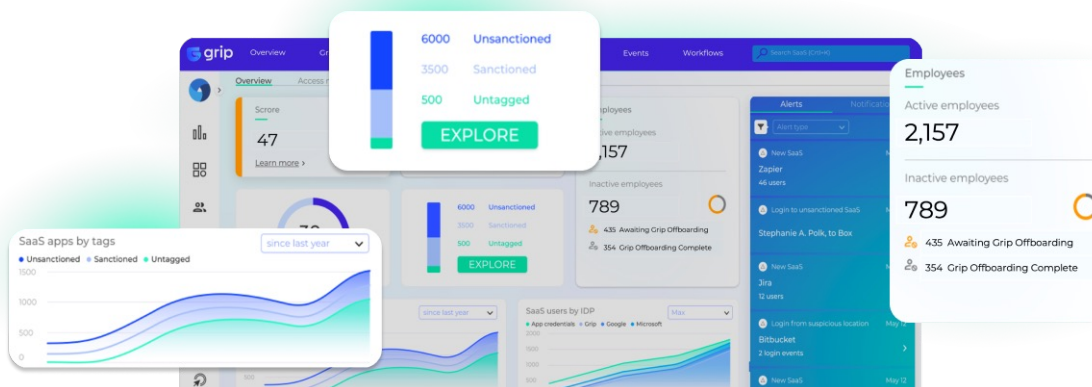

- Uncover identities connected to SaaS services, including business-led SaaS, sanctioned, unsanctioned, managed and unmanaged. Pinpoint identity sprawl with SaaS services.
- Validate identities and SaaS access with Grip's continuous discovery, Tines Pages, and no-code automation.
- Integrate SaaS-Identity security into any process, including email, access management, use justification, cloud security, and identity governance.

Grip SSCP Use Cases

- Automatically detect, map, and mitigate SaaS risks—including 10+ year history and continuous new SaaS discovery
- Remediate and respond faster. Automate remediation to SaaS-Identity threats and exposures, offboarding users, SaaS, or both — from one to thousands.
- Find users with SaaS relationships and corporate credential exposures based on Grip's continuous discovery.
- Safeguard identity sprawl, eliminate weak and duplicate credentials, and risky access to the enterprise SaaS estate.

Grip + Tines Benefits

- Uncover the most relevant risks across your enterprise SaaS layer.
- Eliminate SaaS-Identity risk via automated offboarding for targeted identities and SaaS.
- Integrate security into any process. Schedule workflow runs, trigger automatically, or on-demand to respond to threats.
- Validate identities using SaaS, rapidly remove dangling access, zombie accounts, and abandoned web services.

Grip SSCP | Realize identity-first security to mitigate risks and threats across the enterprise SaaS estate without agents, proxies, or dependencies.

About Tines

Founded in 2018 in Dublin by experienced security practitioners, Tines makes security teams more effective and efficient. Security and operations teams are too often stuck doing tedious manual work, and we want to change that. Tines is an automation platform designed to allow anyone to connect their technology stack and automate any repetitive manual task, regardless of complexity. No integrations, apps, plugins, or custom code required. With a Story Library packed with ready to use and customize workflows and 1,000+ prebuilt templates for common actions, Tines' powerful platform is trusted by the world's leading security teams. Get started with the free community edition: <https://tines.io>.

About Grip Security

Grip's mission is to empower every security team to safeguard identities, whenever and wherever SaaS is used — customers and clouds, employees and websites, partners and portals, users and apps. Grip SSCP discovers and graphs the identity-SaaS attack surface, mapping SaaS services and user-SaaS relationships, identifying risky access and malicious or abandoned SaaS services, and automates action to secure the enterprise SaaS layer. Grip was founded in 2021 and is led by three co-founders who are steeped in security and cyber intelligence and have been included in Forbes's 30 under 30 list and backed by leading investors including YL Ventures, Intel Capital, and Stonemill Ventures.
